

Northstar Meridian Group

Information Security Policy

Document ID: SEC-ISP-014 | Owner: Information Security | Version: 3.0 | Effective: 2026-07-26

The company protects information based on confidentiality, integrity, and availability.

Security requirements:

- Multi-factor authentication is required for corporate systems
- Least privilege access is the default for all applications and data stores
- Laptops and mobile devices must use full disk encryption
- Sensitive data must be encrypted in transit and at rest
- Security patches must be applied according to severity-based timelines

Logging and monitoring:

- Security events are centrally logged and retained according to legal requirements
- Privileged actions are reviewed by the security team

Exceptions require documented approval from the CISO or delegate.
